## SKILLS

### Networking

Networking is the field of computer science that allows computers to exchange data or information. Data can be exchanged either using cable media or wireless media.

Linux facilitates with powerful support for networking. It provides various command-line tools such as ssh, ip, mail, telnet, and more for connectivity with the other systems and servers.

On-demand availability of computer system resources, especially data storage (cloud storage) and computing power, without direct active management by the user.

### Penetration test

simulated cyber attack against your computer system to check for exploitable vulnerabilities. In the context of web application security, commonly used to augment a web application firewall (WAF).

### Programming languages

Ideally, every programmer should have knowledge of a language that's close to the system (C, C#, or C++), a language that's object-oriented (Java or Python), and a powerful scripting language (JavaScript).

### Computer hardware

the physical parts of a computer, such as the case central processing unit (CPU), monitor, mouse, keyboard, computer data storage, graphics card, sound card, speakers and motherboard
